BETHLEM HOSPITAL.

REPORT.

To the Right Worshipful the President, the Worshipful the Treasurer, and the Governors of the Royal Hospital of Bethlem.

My Lords and Gentlemen,

The period having arrived at which it is ordered that the Resident Physician and Superintendent of this Hospital shall render an account of the proceedings of the past year, I have the honor of laying before you the following remarks on the general management of this Institution during the year ending 31st of December, 1854:—

The various alterations in the Building which, through the liberality of the Governors, had on the last occasion I addressed you been sanctioned, have, I am happy to say, progressed steadily and favorably, and now that they have approached completion it is easy to perceive that they are undoubted improvements in the economy of the Hospital; inasmuch as they have already materially contributed to the comfort of the Patients.

In reviewing the Tabular Returns accompanying these remarks, it may be seen, that on the 1st of January,

1854, there were (including those out on leave,) 329 patients in the Hospital, of whom 176 were males and 153 females. From this date until the 31st of December, 1854, there were 232 admitted, 218 discharged, and 21 died; leaving in the Establishment on the 1st of January, 1855, the following 317, with 5 out on leave:—

•					Males.	Females.	TOTAL.
Curable	 a +			• •	58	79	137
Incurable	 		• •	• •	38	36	74
Criminal	 	a #	• •		88	18	106
						-	manus optile
					184	133	317

The number of admissions during the year has again fallen below the average, but this diminution, as I have observed on a former occasion, might be expected. The decrease was more sensible during the past year, since, during the greater part of the summer, one male and one female ward were closed for the purpose of removing the old windows, in order to make room for others of a lighter construction.

On looking at the return of discharges and removals during the past year, it will be seen that they are as satisfactory as the lists of any previous year. The average of those reported as cured is $59\frac{8}{10}$ per cent. on the admissions.

With reference to the term incurable, employed above, to designate one class of our patients, I may be permitted to observe, that though at a similar Institution in the Metropolis, the expression "Boarder" has been substituted for that of incurable, being considered less objectionable, and though the Commissioners in Lunacy are opposed to the use of it, the Governors have thought

proper to retain the word, not that they imagine the mental disease of these patients is necessarily of so confirmed and hopeless a character as to render them without doubt "incurable," but because large bequests having been made to the Hospital for the care and maintenance of "Incurable Lunatics" it is feared the substitution of any other term might legally jeopardize the claim to those legacies.

The past year has not been without several cases of exceeding interest. I abstain, however, from referring to them in this place, as they may be found on official record in the Hospital Case Books, and will well repay a perusal.

The admission of criminal lunatics has been so numerous, and the accommodation so inadequate, that with the sanction and under the warrant of the Secretary of State three several drafts, amounting to twenty-nine, have been made to the Asylum at Salisbury.

The improvement carried out in the construction of the windows has materially altered the character and appearance of the wards; imparting to them an air of freedom and cheerfulness not less apparent to the patients than visitors. Large as the outlay for this work must have been, it cannot fail to be evident to any one visiting the wards, that the funds of the Charity have been well expended where so much real comfort has been obtained.

This alteration has been accompanied by considerable additions to the furniture and fittings of the wards, such as were deemed likely to conduce to the welfare of the patients; and judging from the expressions uttered by many of them, it would appear they are not insensible to the liberal anxiety shown for them.

As very many of the Governors, while fully aware of the large sums annually voted for the general management and alterations in the Hospital, are yet prevented from making frequent visits to the Institution; and, inasmuch, as these Annual Reports are (in the words of the Rules and Regulations of the Resident Physician) "for the purpose of showing the general condition of the patients, and the state and management of the Hospital during the preceding year," it may not be considered irrelevant to make a passing allusion to some of the more important alterations that have been recommended and carried out by the Committee. Amongst these, by no means the least deserving of notice is the alteration of the old windows in the wards: in place of the former heavy frames, darkening the interior and imparting a sad and sombre feeling to all within, we have now light iron frames containing long glass panes, of a sufficient strength to be secure, and yet admitting such an ample supply of cheerful light as to exercise a marked influence on the comforts and spirits of the patients.

Scarcely at all secondary to the above improvement has been the removal of the closed stoves, hitherto employed in warming the various wards of the Hospital, and the substitution for them of open fire-places protected by light wire guards. It is almost needless to dwell upon the advantages arising from this change; and when, as I am happy to say is the case, the patients express their thankfulness for the consideration thus shown for their health, as much as their comfort, it may be felt that the liberality of the Governors has been productive of the happiest result.

In like manner I may notice the satisfaction felt by the supply of cocoa-nut matting to the wards on the female side, and of carpeting to their bedrooms and sitting rooms; these, and the sufficient supply of chairs, couches, and tables, not less than the introduction of modern wooden bedsteads, to replace the former inconvenient fixtures against the walls of the bedrooms, have together completely changed the character of the wards, and imparted to them an air of domestic comfort which is so keenly appreciated by all classes of the English, and certainly not the less so by the unfortunate insane.

Turning from the interior to the external premises of the Hospital, I may draw attention to the improvements which have been carried out in reference to the extensive airing ground for male-patients. It has been rearranged upon a new plan, with flower beds and grass plots, and the whole well drained and intersected with broad gravel walks. In addition to this, has been added a somewhat smaller airing-ground on the north of the building, where the male patients have now the enjoyment derived from a large bowling-green and two skittle-grounds.

I have thus briefly enumerated some of the principal changes and additions that have been brought into operation during the last few years; and I trust when any Governor shall have inclination and opportunity to give them a personal inspection, he will have little difficulty in deciding that the alterations have been improvements, and the funds of the Charity judiciously expended.

It is gratifying to be able to state, that during the entire year the health of the patients has been remarkably good. The number of deaths has been below the average of former years; whilst in not a few instances it

has been more the result of advanced age than physical disease. In six cases out of the twenty-one recorded the age was above 60 years, and it is not less interesting to notice, that in eleven cases, the deaths were from diseases clearly independent of, and not in any way resulting from, the mental condition.

There is great cause for thankfulness in the entire absence of Cholera from the Hospital during a more than usually trying season, when the malady was raging with fatal violence in the immediate neighbourhood.

As regards active occupation, a most important element in the curative treatment of the Insane, as much attention has been given to it as the means at our disposal admitted of. A considerable number of the Criminal Lunatics have been steadily employed during the greater part of the year in the various works in progress in the interior of the building—painting, cleaning, and whitewashing. And on the female side a large portion of the patients are daily employed in washing, ironing, and mangling; and it is gratifying to see how readily the employment is entered upon by the patients, and how completely they regard it as an advantage rather than a task. The marked effect produced by constantly recurring occupation on the bodily health of the inmates of this Hospital, is only equalled by the improvement in their mental condition. Their minds led away from the contemplation of sad and often painful subjects by that which is placed before them, are schooled by insensible degrees in the better and more wholesome control of their thoughts; and thus it invariably happens, that those patients are the most cheerful, and make most certain and rapid progress towards a cure, who are most constantly and actively engaged in

such pursuits and recreations as we are able to place within their reach.

Having thus, so far as I have been able, placed before you a brief, but I trust not altogether uninteresting, account of the proceedings connected with the general management of the Hospital during the year 1854, I will now venture upon other ground.

If I am not mistaken, the Report which the Resident Physician has annually the honor to lay before you is expected to be not less of a suggestive character than statistical; to have reference to the future equally with the past. Taking this view of my task, I will add to what I have remarked relative to our past proceedings a few observations upon what I conceive might be accomplished with this Institution. Whether it be, as many assert, that insanity is steadily on the increase, or as others maintain, that we are simply taking cognizance of and bringing together a large class of patients whose existence was in former times ignored amidst the seclusion and neglect of workhouses, jails, and dwellings of the poor, it is beside my present purpose to enquire. Omitting also all notice of the State Lunatics confided to our care, I will content myself with a few remarks on the Non-criminal Insane treated for cure in this Hospital.

The Rules of the Institution expressly state, that it was established for the reception and cure of "Insane Poor." For a long period after the foundation of the Hospital there were no such places as County Asylums. The cure of the insane, though professed, was practically lost sight of, and Lunatic Asylums were considered and treated as places for the safe custody and restraint of their unfortunate inmates.

It is not, I feel, necessary that I should do more than allude to the fact of the greatly improved system of treatment followed in the present day, both for the rich and poor, and to the vastly increased and increasing accommodation provided for insane paupers in the various Counties; for that class of the insane it would, indeed, appear that little more, if any, remains to be done. There is, however, a class between the pauper and the affluent, a class that there is every reason for believing to be both numerous and increasing, for whom scarcely any provision has, hitherto, been made. I allude to the insane of the middle classes, to such of them as the precarious nature of their occupations may truly enough place under the designation of "Poor;" yet who are not and never have been dependent on the parish for support; who are too poor to avail themselves of the many excellent private establishments for the insane scattered over the country, and whose friends shrink from passing them as paupers to the County Asylum.

When it is borne in mind, that overtasking the mental faculties, and pecuniary difficulties, constitute two of the most prolific causes of insanity; that at the present day, more than at any former period, the greatest social pressure, the fiercest struggle for existence, and the keenest competition for employment, is to be found among the middle classes, it surely cannot be a matter of surprise that amongst such there should be a larger and continually increasing number of insane.

The Records of all Asylums show how liable are clergymen, authors, artists, governesses, professors, and similar persons to be attacked by this terrible calamity. None are more subject to this visitation,

none are less able in a pecuniary point of view, to struggle through the trial of such an affliction, yet none are less cared for by the many charitable institutions of our country.

Within the walls of Bethlem many distressing cases, such as I have alluded to, may be found; persons of good and even superior education, who from their utter inability to obtain admission into private Asylums are grateful to accept the means of treatment this Institution offers them. But you will readily believe, that when their day of convalescence arrives, thankful as they feel, they are not a little pained to find their affliction has associated them with paupers of every grade. This arises from the fact, that every applicant being admissible (unless disqualified either by length of illness or some few other restrictions), parishes are ever willing to avail themselves of the boon, and by placing their Insane at Bethlem save the first year's expense of the County Asylum, to which place, if not cured at the expiration of the twelvemonth, they are removed. It is a small charity to relieve a parish of some £25.; but the association incurred is often a source of sad reflection to our more educated patients.

It is certain that such a blending together of the insane is far from being calculated to promote the curative treatment of the well educated, though poor and sensitive, patient of the middle classes; on the contrary, it cannot fail to awaken unpleasant emotions, and frequently produce much mental irritability.

It requires, I think, but little reflection to assure ourselves that such persons as curates on £80. or £100. a-year, or governesses earning less than half of those sums, cannot be in a pecuniary position to enter a

private Lunatic Asylum; that their previous position unfits them, and when recovered, their future state renders undesirable a close association in the sitting-room, at the dining-table, and in the airing-ground with parish paupers, and yet for this truly unfortunate class of sufferers philanthropy has not yet made suitable accommodation.

A very laudable effort has been made in the County of Stafford, in a measure to meet this pressing demand, by the institution of an asylum where the insane of the middle classes are received at a comparatively small charge, and yet have all the advantages in treatment of a first class asylum. This, however, does not remove our difficulty. The Institution at Coton Hill not having a sure income sufficient for the expenses, necessarily looks to that arising from the patients, and thus the most destitute of the class above alluded to remain unbenefited.

On the occasion of the first meeting in connection with the Coton Hill Asylum, Dr. Conolly in his address, alluding to the middle classes of society, observed:—

"That class comprehended persons of education and respectability, whose means of living depended upon their own exertions, and the moment they were struck with insanity, that moment their means of livelihood were cut off, and they became in reality more helpless than the poor. Such a condition as this, in which the middle classes were placed, was as distressing as any they could well conceive, as no provision was made for such cases."

And further on he continued—

"There was no class which stood in so much need of asylums of this kind as the educated middle class. He could mention a few instances in which the want of

such an institution had been felt. A few years ago, a clergyman, an intellectual man, who spent his time in going about doing good in a large parish, became excited and insane. Until all his means were exhausted he was taken care of at home, if care it could be called; he had two attendants, and the clergyman told him, that when the medical man was expected to pay a visit, which was once or twice a week, they had him out, and he presented a tolerable appearance; but, as soon as the medical man left, they strapped him down, and kept him fastened down while they went drinking and carousing. The consequence was, that he became frantic, and more violent restraint was resorted to. At length he was brought to Hanwell. He had been fastened down so long, that he lost the use of his legs; but, he was happy to say, that in the course of a few months he recovered; and though he was very grateful for his recovery, he felt deeply that a person in his situation of life should have been classed with paupers. There were many cases of this kind. Only last week he received a letter from a clergyman who supported an insane uncle whom he never saw; a large portion of his income went in this way; and, as he could not make him a pauper, and could not afford to send him to a good asylum, he was obliged to send him to a cheap asylum, where the treatment was not such as one who wished to ameliorate the malady could wish."

My object in bringing the case of the middle class of the insane before the Governors is, to suggest, with very great respect, for their consideration, that the rules and objects of this Institution might be as effectually carried out, and a far greater boon conferred on society, than is at present the case, were our admissions to consist solely of patients from this hitherto much neglected, but sadly afflicted portion of the community.

Too great a temptation is offered to parishes to rid themselves of their lunatic poor, whose period of disease has not exceeded the twelvemonths; and though we may have room for all, and to spare, our educated class must be the sufferers.

In conclusion, I would assure the Governors that I have not ventured to offer these suggestions without the fullest consideration of the subject in all its bearings—of the desirability or practicability they will judge; and, I trust, at the same time believe, that the welfare of a large and loudly-imploring class of sufferers has been my object in introducing it to their notice.

I beg to thank the Members of the Committee for the individual kindness and liberality I have personally received from them, not less than for the consideration they have always given to my recommendations, and the assistance I have invariably received in the discharge of my duties. I trust I may continue to merit the confidence that has so generously been given me, and beg to subscribe myself,

My Lords and Gentlemen,

Your most obedient humble Servant,

W. CHARLES HOOD, M.D.

SUPPER.

Sunday, Monday, Tuesday, Males.... Same as at Breakfast.

Thursday, and Friday

Males.... 7 oz. Bread, 2 oz. Cheese, 1 pt. Beer

Every Day Females.. Same as at Breakfast.

Patients in employment in the Grounds, Workshops, or Laundry, to be allowed 4 oz. of Bread, 1 oz. of Cheese or $\frac{1}{2}$ oz. of Butter, and $\frac{1}{2}$ a pint of Beer for Luncheon, and $\frac{1}{2}$ a pint of Beer in the Afternoon.

Every Patient to be allowed $1\frac{3}{4}$ oz. Tea, 8 oz. of Sugar, 8 oz. of Butter, and $1\frac{1}{2}$ pints Milk weekly.

On Christmas Day the Dinner to be Roast Beef and Plum Pudding.

On New Year's Day, a Mince Pie to be added to the usual fare.

On Good Friday, a Bun.

On Easter and Whit Monday, 6 oz. of Roast Veal to be allowed instead of the usual Meat for the day.

The Dinners to be further varied by the occasional substitution of Pork and Bacon, when Peas and Beans are in season; and also by the occasional substitution of Fish, and Fruit Pies, when Fish and Fruit are plentiful and good.

The Sick to be dieted at the discretion of the Resident Physician.

The Attendants to have at all times the means of obtaining Gruel for such Patients as may require it.

The above to be considered maximum allowances, and all quantities unconsumed are to be taken in diminution of the next supply from the Stores of the Hospital.

		£658	0	0

The Hospital is repaid by Government, on account of Criminal Lunatics the wages of seven male and two female attendants, with an allowance of £35 per annum each for maintenance and clothing.

The wages of male attendants commence at £25 per annum, and they increase, if their conduct be satisfactory, £1 yearly afterwards, until they become £35 per annum, after which no further increase is allowed. Attendants in charge of a Ward are allowed £5 per annum extra. Female attendants commence at any amount not exceeding £18 per annum, and after, they increase with like restriction £1 yearly until they become £25 per annum, after which no further increase is allowed. The wages of male attendants were permitted, previous to the year 1841, to increase to £60 per annum.
